Veda Nair

San Francisco Bay Area | veda.nair09@gmail.com | linkedin.com/in/veda-nair | veda-nair.github.io

Summary

Mid-level machine learning data scientist with 3+ years shipping production ML systems for consumer products at scale. Specialized in user segmentation, causal inference, experimentation, and GenAI evaluation, with end-to-end ownership from modeling to deployment across 15M+ users at Adobe.

Education

Stony Brook University — Stony Brook, NY
MS in Data Science — *December 2024*

Vellore Institute of Technology — India
B.Tech in Electrical Engineering — *July 2021*

Technical Skills

Languages: Python, R, SQL
ML & Frameworks: Scikit-Learn, XGBoost, LightGBM, TensorFlow, Keras, Pandas, NumPy, PySpark, MLflow, LangSmith
Data & Cloud Platforms: Databricks, Snowflake, Airflow, Microsoft Azure, Splunk, Git
Visualization & Analytics: Power BI, Tableau, Adobe Analytics, Databricks Dashboards
Methods: Causal Inference (Difference-in-Differences, Propensity Score Matching, Uplift Modeling), Hypothesis Testing, User Segmentation, A/B Testing, LLM Evaluation, ML Monitoring & Drift Detection, Feature Engineering, Product & Behavioral Analytics, PLG Strategy

Experience

Adobe Inc. — San Jose, CA
Data Scientist (Machine Learning), Photoshop — Promoted within 18 months — *Jan 2025 – Present*

- Built a two-stage XGBoost/LightGBM classifier identifying 2.5M Creative Pros among 15M+ Photoshop users, with a second-stage model resolving borderline cases; deployed as an experiment-exclusion gate shielding Pros from risky beta features, including the AI-assisted workspace rollout in Photoshop Desktop; labels adopted across Creative Cloud products.
- Own production Pro and Skill Segmentation models end to end, with MLflow experiment tracking and automated drift monitoring to maintain accuracy across Photoshop releases.
- Drove GenAI adoption through PLG campaigns with contextual in-product triggers across 5 new AI features, contributing to 50%+ of Photoshop MAU regularly using AI in their creative workflows.
- Led a causal inference study on the Photoshop AI Assistant using difference-in-differences, propensity score matching, and uplift modeling to measure its impact on new-user 7- and 14-day return rates, finding that most new users begin with the AI Assistant rather than a blank canvas and reshaping beginner onboarding.
- Built LangSmith-based eval systems for the Photoshop AI Assistant, surfacing failure patterns and scoring use cases by iteration ease to prioritize 0-to-1 features for 750K Beta users.
- Built telemetry pipelines over a 5TB Photoshop usage database (5M events/day); deployed a self-serve reasoning bot adopted by 50+ PMs and PMMs to query production data without analyst support.
- Partnered with Engineering, Product, and Marketing on P0 launches, presenting insights to senior leadership.

Data Science Intern, Photoshop — *May 2024 – Aug 2024*

- Architected the Skill Segmentation model from the ground up (LightGBM classifier) for 15M+ users, routing users to tailored tutorial paths and GenAI experiences based on proficiency.
- Powered Photoshop's guided tutorial system, driving a 10% lift in beginner success rates within the first week; skill labels power personalized guidance and experiment gating for Photoshop Desktop users.

Accenture — Bangalore, India
Machine Learning Engineering Analyst — *Jun 2021 – Jul 2023*

- Built demand forecasting models for supply chain and public-sector clients with 85% forecast accuracy.
- Developed inventory optimization models that reduced excess inventory and stockouts by 30%.
- Delivered recommendation and optimization solutions end to end, reducing client costs by $5M annually.
